RADIO FREQUENCY EXPOSURE

EUT Specification

EUT	CB11	
Frequency band (Operating)		
Device category	✓ Portable (<20cm separation)✓ Mobile (>20cm separation)✓ Others	
Exposure classification	 ☐ Occupational/Controlled exposure (S = 5mW/cm²) ☐ General Population/Uncontrolled exposure (S=1mW/cm²) 	
Antenna diversity	 Single antenna Multiple antennas ☐ Tx diversity ☐ Rx diversity ☒ Tx/Rx diversity 	
Max. output power	2.400-2.460GHz: 0.24mW	
Antenna gain (Max)	0 dBi	
Evaluation applied		

Remark

- 1. The maximum output power is 0.24mW at 2460MHz (with 1 numeric antenna gain.)
- 2. DTS device is not subject to routine RF evaluation; MPE estimate is used to justify the compliance.
- For mobile or fixed location transmitters, no SAR consideration applied. The maximum power density is 1.0 mW/cm² even if the calculation indicates that the power density would be larger.

TEST RESULTS

No non-compliance noted.

eirp = pt \times gt = $(E\times d)^2/30$

Where:

Pt = transmitter output power in watts,

gt = numeric gain of the transmitting antenna (unitless),

E = electric field strength in V/m, --- $10^{(dBuV/m)/20)}/10^6$

d = measurement distance in meters (m) --- 3m

So Pt = $(E \times d)2/30 \times gt$

Maximum Field strength: 89.02 dBuV/m @3m –Channel high:2460MHz Refer to FCC Part 15C 15.249 Test Report page 12.

Ant gain = 0dBi; so Ant numeric gain=1

So, $Pt = \{[(10^{(89.02/20)}/10^6)\times3]^2/30\times1\}\times1000mW = 0.24 mW$

Report No: C150630R01-RPW

Standard Requirement:

According to 447498 D01 General RF Exposure Guidance v05

 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f_{(GHz)}}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR, ¹⁶ where

- f_(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation¹⁷
- The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is ≤ 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

Tune-up Maximum rated power (mW)		0.24
Body	Antenna to user (mm)	5
	Frequency(GHz)	2.460
	Test result	0.075
	SAR exclusion threshold	3

Per KDB 447498 D01v05r01 exclusion thresholds is 0.075< 3, RF exposure evaluation is not required.
